

1 ABSTRACT OF THE INVENTION

2 The present invention relates to a computer accessible system for electronically
3 storing a model which communicates the physical attributes of a structure along with
4 warranty, insurance and other information relative to that structure. The system of the
5 present invention integrates physical information in a model which is displayed as a physical
6 representation of the structure with other non-physical information. Selecting specific areas
7 of the model provides access to data regarding non-physical characteristics of that area of the
8 structure and the contents thereof. Data relevant to warranties, insurance, maintenance or
9 other information can be accessed by selecting portions of the model or indices attached or
10 related to that portion. Systems of the present invention allow multiple users to remotely
11 access the information and model via a computer network, such as the Internet, in order to
12 make informed decisions regarding the structure and its characteristics.
